

PROFILE

Computer Science undergraduate with strong foundations in algorithms, Python, data structures, and database systems. Experienced in peer tutoring, lab support, and explaining technical concepts in clear, structured language. Interested in using teaching support work to help students build confidence in programming, debugging, and problem-solving.

CORE SKILLS

Algorithms	Python	Data Structures	Database
------------	--------	-----------------	----------

EDUCATION

B.S. in Computer Science, School of Information Technology

Expected Graduation: June 2027

Relevant coursework: Algorithms, Data Structures, Database Systems, Object-Oriented Programming, Discrete Mathematics, Software Engineering, Computer Networks.

TEACHING & ACADEMIC SUPPORT EXPERIENCE

Teaching Assistant Candidate - Programming Fundamentals

School of Information Technology | 2026

- Prepared sample explanations for Python syntax, loops, functions, lists, and debugging strategies.
- Helped students break programming tasks into smaller logical steps during office-hour simulations.
- Practiced giving concise feedback on code readability, variable naming, and error messages.

Peer Study Group Leader - Algorithms and Data Structures

Student Academic Support Center | 2025-2026

- Led weekly review sessions covering recursion, sorting, searching, stacks, queues, trees, and graph traversal.
- Designed short practice questions to help classmates connect theoretical concepts with implementation details.
- Encouraged collaborative problem-solving and comparison of multiple solution approaches.

Database Project Team Member

Course Project | 2025

- Built a small course-management database prototype using relational schema design and SQL queries.
- Created entity relationship diagrams, normalized tables, and tested common query scenarios.
- Documented project logic so teammates could understand data flow and maintain the system.

SELECTED PROJECTS

Student Task Tracker - Python & SQLite

Developed a simple command-line application that stores assignments, deadlines, status updates, and course tags. Implemented CRUD operations and basic search filters.

Sorting Algorithm Visual Notes

Created annotated examples comparing time complexity and implementation tradeoffs for merge sort, quicksort, and insertion sort.

Library Database Mini-System

Designed tables for books, users, borrowing records, and overdue status; wrote SQL queries for lookup and reporting.

ADDITIONAL INFORMATION

Languages	English; Mandarin Chinese
Tools	Python, SQL, SQLite, Git, VS Code, MS Word, PowerPoint, Excel
Teaching Style	Patient, step-by-step, example-driven, and focused on helping students understand the reasoning behind code.

This is a mock CV generated for software testing and does not represent a real applicant record.
